📶 Switching to Mode Bridge

It is necessary to have IPv4 to switch to Bridge mode. You can find out by opening the address www.mojeip.cz and under your address there is a line "Protocol:" where you will see either IPv4 or IPv6. If you have IPv6 here, you need to contact us to switch to IPv4. Only then will it be possible to switch the modem into Bridge mode.

- **Enter the address in the internet browser [192.168.0.1](192.168.0.1) .**
- **You can switch the settings to Czech at the bottom of the page.**
- Enter the password that is shown on the label at the bottom of the modem next to "Settings password:".

- Now we will select the **Modem Mode** tab.
- There are two options here: Modem Mode (Bridge mode) and Router Mode (Modem works like a router).
- Select **Turn on modem mode**.
- We will confirm the change by clicking the **Apply changes** button.
- The modem restarts several times and is ready for use within 5 minutes at most.

In Bridge mode, you can now access the modem administration via the address http://192.168.100.1

The troubleshooting procedure did not help?

- In case of non-functionality even after performing the fixed internet troubleshooting procedures, you need to contact our technical support by calling or using the Tobi chatbot, which you can find on our website www.vodafone.cz.
