

## LTE Modem Huawei B2338 – 168 – Wi-Fi settings

- We set Wi-Fi in the modem interface.
- We recommend setting up Wi-Fi using a connected computer with a LAN cable.
- We will open a web browser for the settings. (Google Chrome is recommended)

- Open a web browser and enter: [192.168.1.1](https://192.168.1.1)

- The link will redirect you to the router's login page.

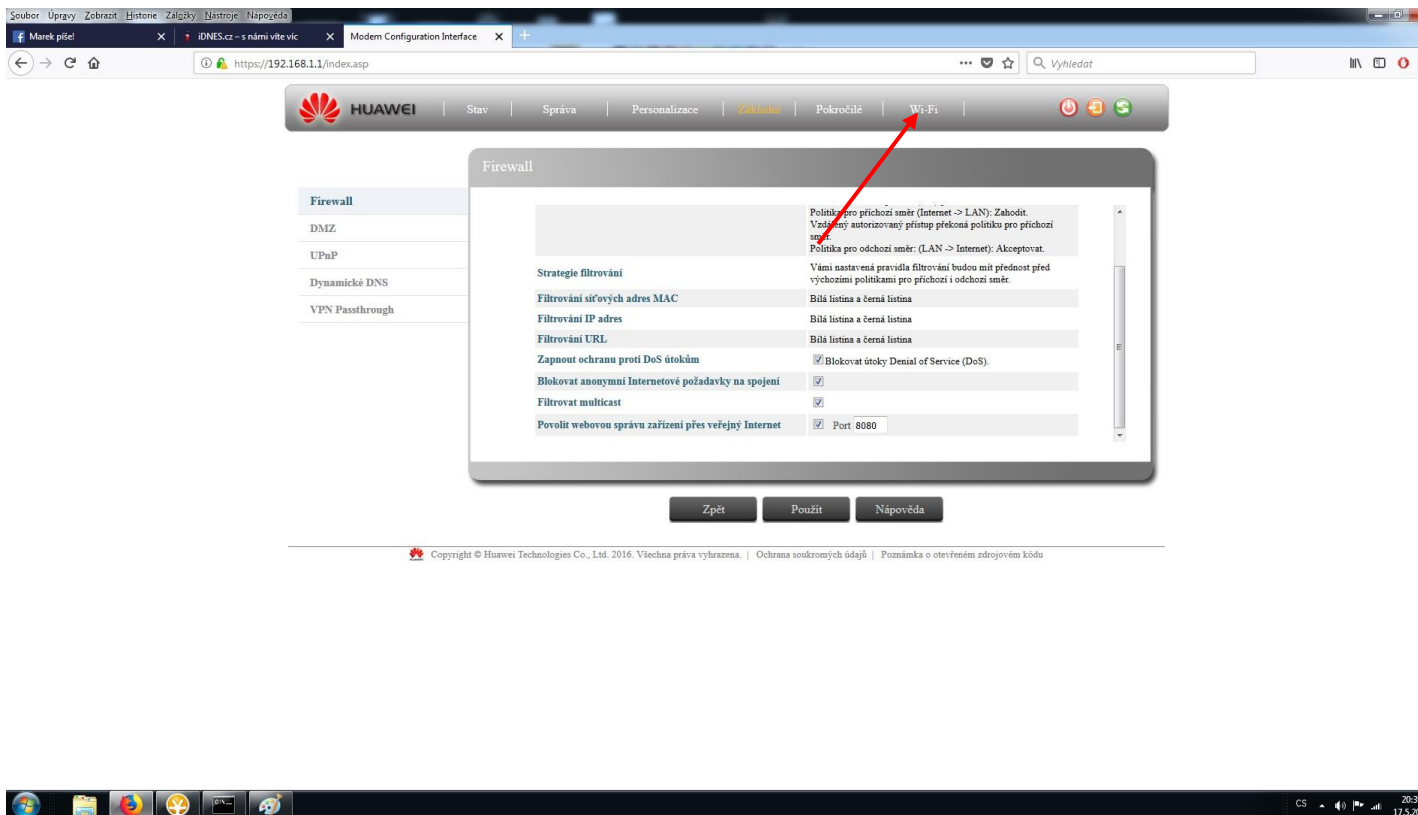

- Enter the information from the modem label.

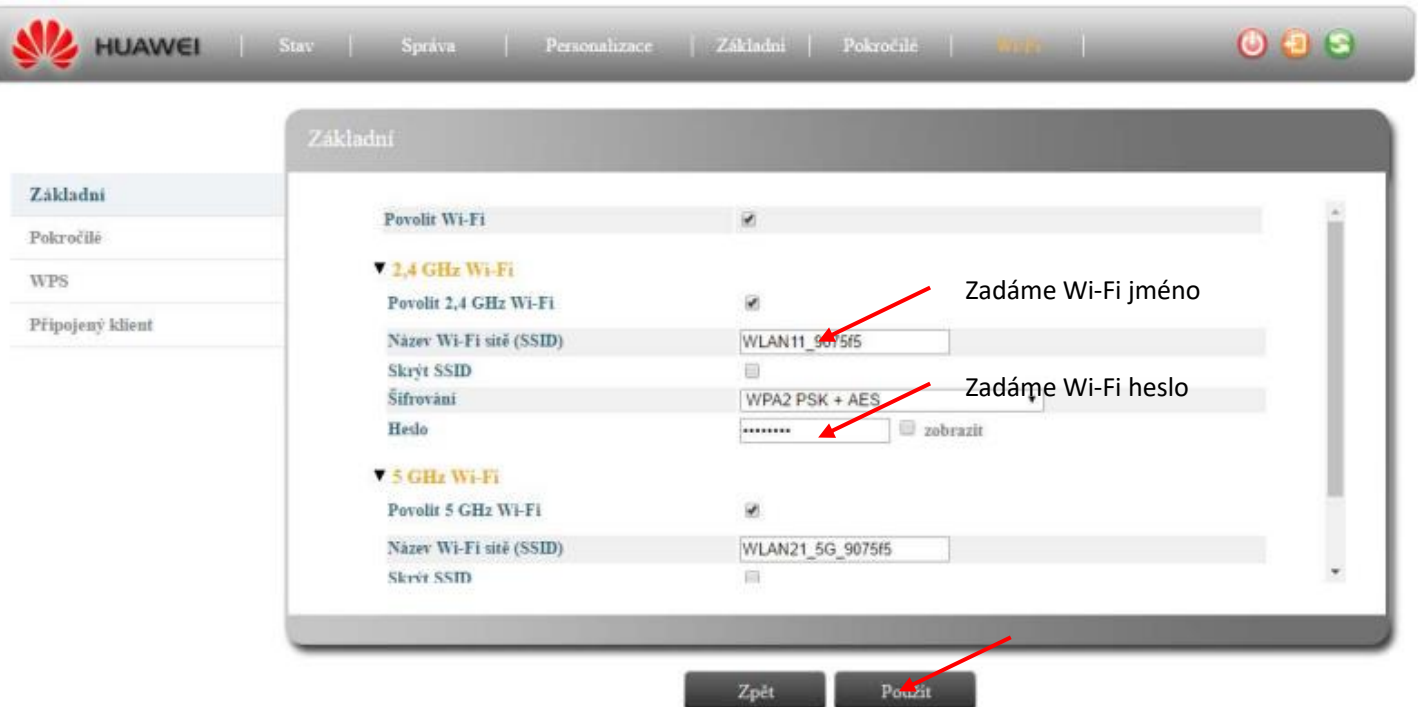

- If it asks us for a new password, we choose any new one, or we skip it.
- On the home page, select Wi-Fi in the top right.

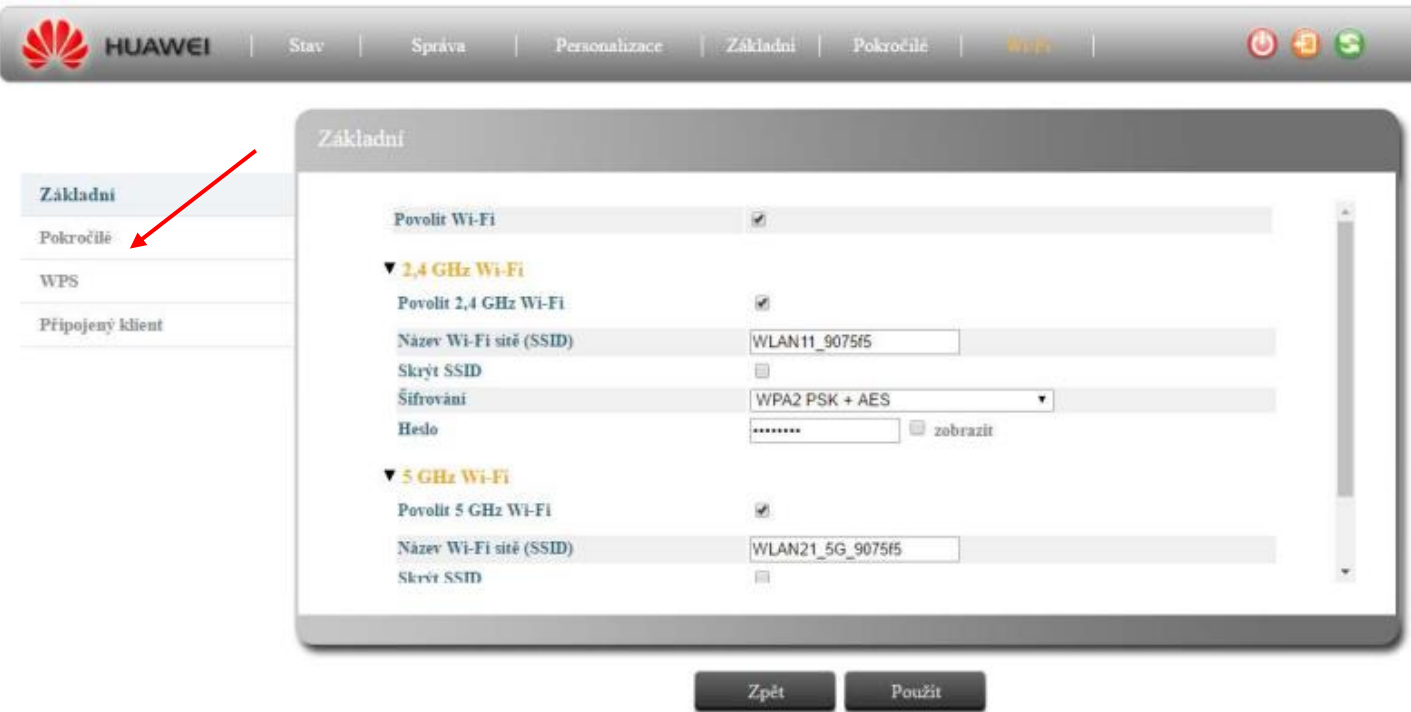

- We then change the required values as necessary.

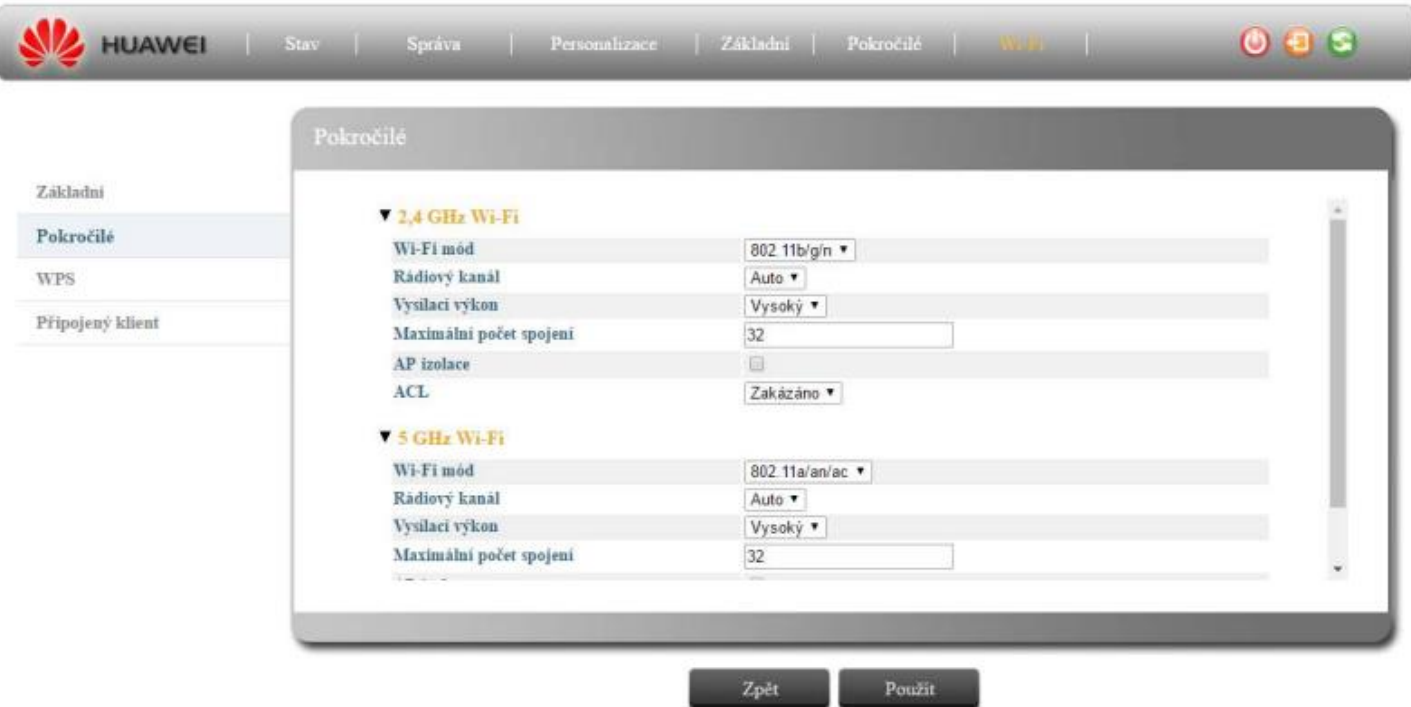

## How to set the Wi-Fi channels:

- Wi-Fi channels can be set up in the Wi-Fi – Basic – Advanced section.

- We then change the Wi-Fi settings as needed.

**We will return all the settings to their original state by factory settings.**
