

LTE modem Huawei B2368 - 66 - Wi-Fi indicator does not light up

- If this indicator is not lit, it means that there is a problem in the Wi-Fi adapter of the router or that the Wi-Fi is just turned off.
- First, we will try to test whether the Internet is working for us, if we have the opportunity to connect using a LAN cable, we will verify whether the router is transmitting the Internet or not.
- When it works, we do a check via the modem interface. (more in the Wi-Fi settings) If the Wi-Fi fails to turn on, we have to reset to factory settings.
- We press the RST button in the back, hold it for at least 20 seconds, release it and let it load.

Notice:

All Wi-Fi settings are reset to factory settings as well, you need to find the Wi-Fi name and password on the modem label.

Reset button.

The troubleshooting procedure did not help?

- If even a reset does not help to solve the problem, you need to contact the technical support department by calling us or using the Tobi chatbot on our website www.vodafone.cz.
- **Only a service technician authorized by Vodafone can replace the router or antenna (manipulate it).**
