

Modem settings from TP-Link

- In the first step, we need to check whether the TP-Link modem supports the VDSL/ADSL service.
- The fastest possible detection is a visual check of the back of the modem.

There must always be a gray DSL port in the back. If it is not there, it is not a modem or a modem router.

- First, connect with a narrower cable with an RJ 11 connector.
- Then connect the modem to the electric socket and let it load.

Click on the available connections on your computer and according to the label on the modem you will find the Wi-Fi name of the modem.

- After connecting, it will report Wi-Fi - Connected, no internet.
- Let's open a web browser. We recommend Google chrome.

Most often we enter this type, but it may vary, check the modem label if necessary.

- The page welcomes us with the initial entry of a new password and its confirmation.
- **Notice:** Some TP Link devices have login information on the modem label.

New Password

Low Middle High

Confirm Password

Let's Get Started

Type a new password.

Repeat it.

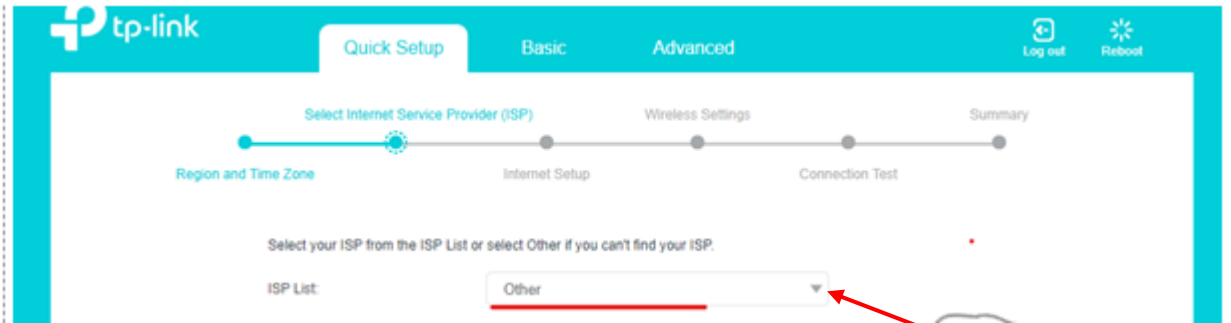

Modem administration access button.

- On the first page in the quick settings, you can set the Region and TIME ZONE. After entering the Czech Republic, the Time Zone should be filled in automatically. If not, then enter the time zone +1 (Berlin, Rome, Vienna) and we will enter **NEXT**.

Region: Czech Republic

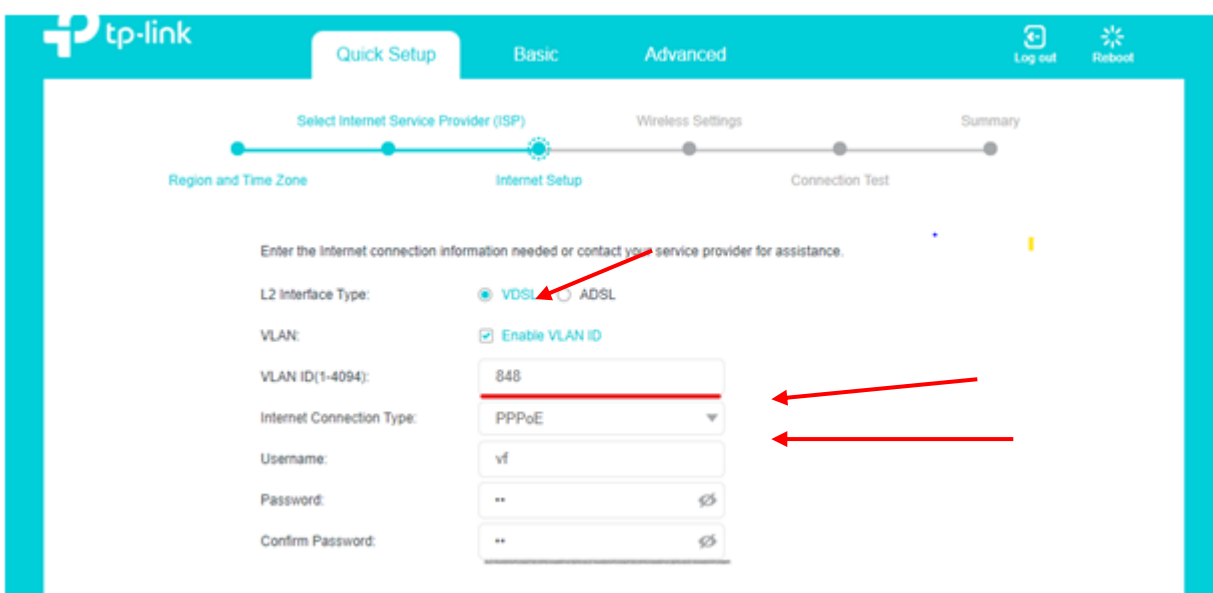

Time Zone: (GMT+01:00) Amsterdam, Berlin, Rome, Stockholm, Paris, Prague, Bratislava

- On the next page you need to select an operator, please select **VODAFONE – VDSL** or **ADSL** depending on whether you have a speed of up to 16 mbit/s (ADSL) or 20 mbit/s and more (VDSL). If not listed here, enter Other.
- Then we click on **NEXT**.

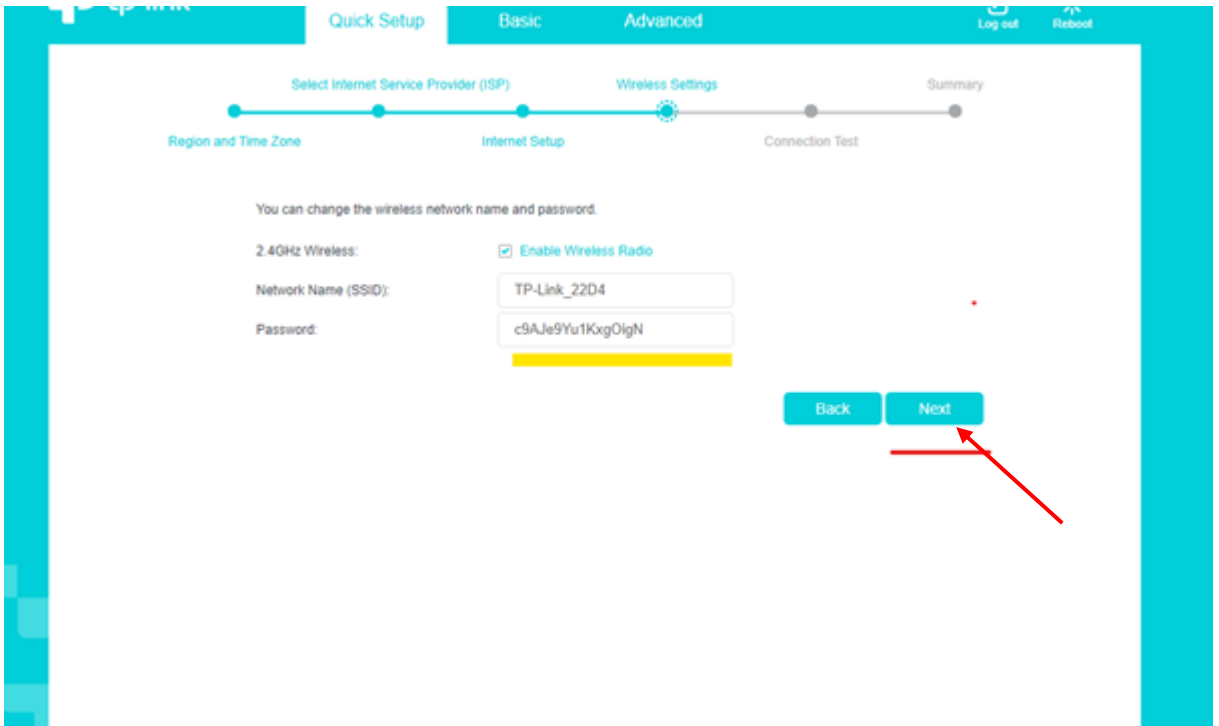

If you can't find Vodafone ADSL/VDSL here, enter other. Attention, if you enter the other way around, the line will not work.

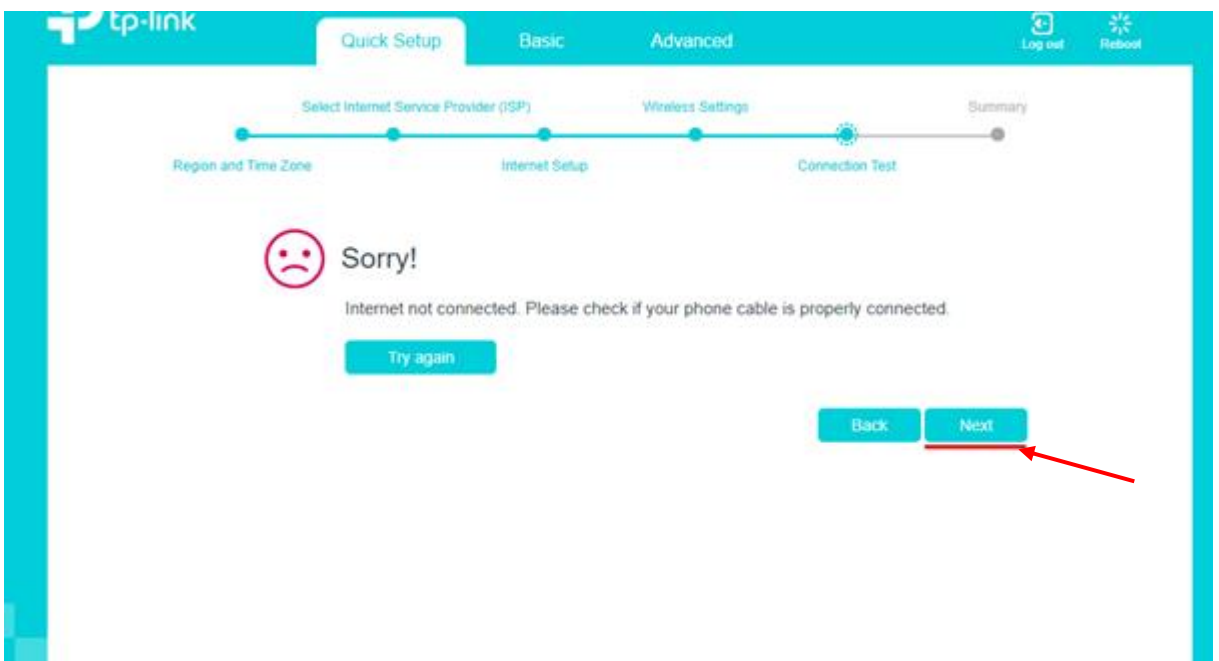

- If we enter Other, it is then necessary to select a service, which we have again either ADSL or VDSL. (As quickly stated above).
- Enable VLADN ID and enter 848.
- Select Connection Type: PPPoE.
- Enter only "vf" in username password and confirm password.
- Then we click on **NEXT**.

If you are connected on Wi-Fi, skip the next step, if you are connected over a cable, you can reset the Wi-Fi here according to your requirements.

- On the next page, the TP Link modem will perform a connection test, but it may not work because the modem is logging in to the network and is only adjusting itself according to the line's requirements.
- If Error pops up, click **NEXT**.

- A save page may appear, please click **SAVE** in that case.
- Here, the modem has not yet received all the necessary data, click on **FINISH** and wait to see if the modem logs in and works.
- **Waiting time must not exceed 10 minutes**

The screenshot shows a configuration progress bar with five steps: Region and Time Zone, Select Internet Service Provider (ISP), Internet Setup, Wireless Settings, and Summary. The 'Internet Setup' step is currently active. Below the progress bar, the following configuration details are displayed:

Internet Connection Type:	PPPoE
IP Address:	0.0.0.0
Subnet Mask:	0.0.0.0
Gateway:	0.0.0.0
DNS Servers:	0.0.0.0,0.0.0.0
Connection Status:	Disconnected
2.4GHz Wireless:	Enabled
Network Name (SSID):	TP-Link_22D4
Password:	c9AJe9Yu1KxgOigN

At the bottom right of the configuration area, there is a red button labeled "Finish".

- 
- The selected TP Link may not support the setting of line profiles and may thus cause crashes or speed problems.
 - In this case, it is necessary to contact our technical support to reset these profiles.
 - **Attention: Unfortunately, Vodafone cannot guarantee the correct functioning of modems and routers purchased from other companies (Alza, Mall, etc.).**
