

Vodafone Station (Arris TG3442DE)

Switching to Mode Bridge

- It is necessary to have IPv4 to switch to Bridge mode. You can find out by opening the address www.mojeip.cz and under your address there is a line "Protocol:" where you will see either IPv4 or IPv6. If you have IPv6 here, you need to contact us to switch to IPv4. Only then will it be possible to switch the modem into Bridge mode.
- Enter the address in the internet browser 192.168.0.1 .
- You can switch the settings to Czech at the bottom of the page.
- Enter admin as the username. Enter the password indicated on the label on the back of the modem and click the "Login" button.

- In the top menu, select the **Settings** option and in the left menu, select **Modem Mode**.

- There are two options here: Router mode (The modem works as a router) and Bridge mode (Bridge).
- Choose the option **Bridge mode**.
- Click the **Confirm** button to save the change. The modem will now restart and the change will be made within 5 minutes at most.

In Bridge mode, you can now access the modem administration via the address <http://192.168.100.1>

The troubleshooting procedure did not help?

- In case of non-functionality even after performing the fixed internet troubleshooting procedures, you need to contact our technical support by calling or using the Tobi chatbot, which you can find on our website www.vodafone.cz.
